Why iPads?

MacKillop Catholic College has spent 2014 trialling a number of devices to determine which would best suit our school and our needs. After much consideration and research iPads have been chosen as they address many of our requirements. These include:

- iTunes offers significantly more apps for education which have been tried and tested by teachers around the world.
- iPads offer flexibility and portability of learning.
- iPads are very user friendly and provide learning opportunities for all age and abilities levels.

21st Century Education encourages students to create, communicate, collaborate, critically think, problem solve and explore ideas beyond the boundary of a classroom. The iPad helps to facilitate this, along with other applications such as Google Apps for Education.
